Report Guidelines for Contests

- The report for each contest is worth half the marks and should provide detailed development and implementation information to meet contest objectives (15 marks).
- Marking Scheme:
  - The problem definition/objective of the contest. (1 mark)
    - Requirements and constraints
  - Strategy used to motivate the choice of design and winning/completing the contest within the requirements given. (2 marks)
  - Detailed Robot Design and Implementation including:
    - Sensory Design (4 marks)
      - Sensors used, motivation for using them, and how are they used to meet the requirements including functionality.

Report Guidelines for Contests

- Controller Design, both low-level and high-level control (including architecture and all algorithms developed) (5 marks)
  - Architecture type and design of high-level controller used (adapted from concepts in lectures)
  - Low-level controller
  - All algorithms developed and/or used
  - Code changes and additions for functionality
- Future Recommendations (1 mark)
  - What would you do if you had more time?
  - Would you use different methods or approaches based on the insight you now have?
- Full C++ ROS 2 code (in an appendix). Please do not put code in the text of your report. (2 marks)

Report Guidelines for Contests

- Contribution of each team member with respect to the tasks of the particular contest (both robot design and report). You can use an Attribution Table for this. (Towards Participation Marks)
- The contest package folder containing your code will also be submitted alongside the softcopy (<u>PDF version</u>) of your report. (Towards the Code Marks Above)
- Your report should be a maximum of 20 pages, single spaced, font size 12 (not including appendix).

• You will submit everything (report+ contest package folder) **at the beginning of your lab session on contest day on Quercus**. Please have a member of your group upload both your: 1) report (in pdf), and 2) contest package folder containing your code.
